IVR IntelleScript PRO

Quick & Easy VAS deployment for 3G/GSM and IP networks

IntelleScript Pro is a multifunctional platform solution designed for telecommunication providers, content distributors, and corporate enterprises to develop and deploy a wide variety of voice and SMS services.

Comprehensive solution: the system contains 3G/GSM/IP/PSTN connectivity components, an application execution core, an integrated development environment, administration and monitoring tools, content management and CDR generation/activity reporting.

Distributed architecture: the system allows for single server or clustered deployment for maximum stability, performance and capacity in all types of networks including geographical redundancy.

High availability: the system features a hot backup of every functional module for uninterrupted operation and comprehensive internal redundancy design without SPOF.

High port density: the system is designed to minimize cooling requirements, installation footprint and power consumption.

IntelleScript Pro relies on the state-of-the-art hardware by Dialogic®, a world recognized leader of the computer telephony market. IntelleScript Pro is a powerful, high-capacity telco grade IVR solution currently serving over 100 cities with a proven record of exceptional reliability (99.99%) and outstanding performance (240 CAPS).

Fast facts - Forte-IT

- Telecom software manufacturer since 1998.
- System supplier for wireless, PSTN and IP networks.
- Over 1000 E1 ports (more than 30000 lines) installed.
- Experts in signaling, media solutions and VAS services.
- Strong engineering expertise.
- Fast, reliable 24/7 support.

Applications

- Information Services
Voice Portal, E-tickets, Voice-Mail.
- Social Networking Services
Blogs, Chats, Dating.
- Contact Center Solutions
Help Desk, Banking, Payments.
- Entertainment Services
Games, Mobile Content, Bets, Adult 18+.

Key features

- Network signalling: ISUP, ISDN, H.323, SIP.
- IN signaling : INAP, IS.41 WIN, CAMEL.
- E1, T1, Ethernet connectivity.
- Up to 720K busy hour call attempts.
- Linear scalability of E1 ports.
- VoiceXML and ccXML for rapid application development.
- Efficient scripting language for complicated services.
